Project: Green Municipalities Program

Project management: State of Pará

FUNDO AMAZONIA

IMPACT

Monitoring and Control Component (2)

Governmental actions, through the Green Municipalities Program, ensure the adequacy of anthropic activities to environmental legislation in Pará

OUTCOME

Expanded access of rural producers from 100 municipalities from Pará to the environmental regularization of their rural properties

OUTCOME

Municipal environmental institutions structured to be qualified for the decentralized environmental management

OUTPUT

Performance of local agreements to battle deforestation and strengthening of the agreements already formed

OUTPUT

Production of digital georeferenced base and mapping of land use and forest cover of 615,000 km², to supplement the base available

OUTPUT

Development and validation of the CAR, with georeferencing of rural properties

OUTPUT

Development and implementation of an electronic system to support the municipal environmental management

OUTPUT

Physical structuring of 34 municipal environmental agencies

OUTPUT

Training of municipal technicians on the themes of environmental management and licensing for the field validation of deforestation in 34 municipalities

OUTPUT

Development of studies to subsidize the environmental management of the municipal organs
