Project: Going Green

Project management: The Nature Conservancy do Brasil (TNC Brasil)

IMPACT
Monitoring and Control Component
Governmental and non-governmental actions ensure the adequacy of human activities to the environmental legislation in the states of Pará and Mato Grosso

OUTCOME
Institutions for monitoring and environmental control structured and upgraded in 7 municipalities of Mato Grosso (MT) and 5 municipalities of Pará (PA)

OUTCOME
Increased access of farmers from 7 municipalities of Mato Grosso and 5 municipalities of Pará to the environmental regularization of their properties

OUTPUT
Coordination with municipal governments to raise awareness of farmers for the establishment of an economic development model based on environmental sustainability and aiming for their registration in the Rural Environmental Registry (CAR)

OUTPUT
Creation of an environmental compliance monitoring system of rural properties to be made available to the environmental agencies and annual update of the deforestation dynamics

OUTPUT
Update of the cartographic database on the scale of 1:25,000 with geographic referencing of the rural establishments and operational support for the environmental licensing of farming activities

OUTPUT
Implementation of a Portal for the registration and monitoring of rural establishments with direct interface with the environmental secretariats of the states of MT and PA and integration with the Program More Environment from the Ministry of the Environment

OUTPUT
Local zoning generating landscape scenarios to guide strategic plans for the compensation of legal reserve areas (RL) and provision of regional recovery plans of RL and permanent preservation areas (APP's)

OUTPUT
Evaluation of the contribution of the legal reserves areas (RL) and permanent preservation areas (APP) or rural properties to the conservation of biodiversity
